Art Unit: 1625

Restriction is required as follows:

- I) the epoxyketone subject matter wherein at least one of A or J is present
- II) epoxyketone subject matter where A and J are not present
- III) the boron containing subject matter wherein at least one of A or J is present
- IV) the boron containing subject matter where A and J are not present

Restriction is proper because the claims as originally filed in the PCT read on the prior art and a single unity of invention was not present.

The claims are drawn to a huge mass of material because of the part of the molecule containing the hugely substituted phenyl and widely varying A, J, D, E and G variables. When A and/or J form a ring many disparate heterocycles occur.

Because of the provisos limiting the claims in the boron subject matter it is clear that there is old material encompassed in the claims in each of the above areas. Thus the art that applies to said material does not apply to the non-boron containing material and restriction is justified.

Applicants must elect 1 of the above and also elect a single disclosed species in case no generic claim is found allowable.

The claims should be amended to reflect the election.
